DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (f) he did not himself invent the subject matter sought to be patented.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by JP 11-106380.

The reference discloses that dioxetane derivatives having excellent in thermal resistance, mechanical and adhesive properties are useful for coating application. The formula (1) in the reference (wherein R=H) anticipates the claimed compound with the present formula (4).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11-106380.

Application/Control Number: 10/801,459

Art Unit: 1756

The reference teaches the reference compound having dioxetane rings in which can be processed by cationic polymerization. See section [00001]. The reference differs from the claims in that the claims contain at least 10 % by mass for a polymerizable liquid crystal composition. Although the percentage of dioxetane is not disclosed by the reference, it would have been obvious to those skilled in the art to adjust the initial percentage of the dioxetane monomer according to its applications (thermal resistance, adhesion, photoresist and thermosetting resin) to obtain the present invention.

5. Claims 1-10 are rejected under 35 U.S.C. 102(a)/(f) as being anticipated by Lub (US 6,660,344 or WO 02/28985).

The reference discloses the polymerizable liquid-crystalline dioxetane represented by the formula (I), which anticipates the claimed compound with formula (3). The reference further teaches that the polymerizable liquid-crystalline dioxetane dissolved in a suitable solvent and mixed with a suitable cationic photoinitiator. The solution is then spincoated on a substrate, preferably at room temperature or elevated temperature, and the resulting film is polymerized using a suitable UV source (examples 7 and * on col. 15). This mixture prepared as a 25/75 w/v solution in chlorobenzene was spincoated at 800 rpm on a glass substrate coated with rubbed polyimide. After heating the sample for 15 minutes at 60 °C for good alignment (see Example 9). The reference compounds and compositions are useful in various applications, e.g. liquid crystal devices, sensors, and optical precision instruments. See abstract and the Examples. The Examples (1-6)

Art Unit: 1756

anticipate the claimed compound. Therefore, the reference anticipates the present invention.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shean C. Wu whose telephone number is 571-272-1393. The examiner can normally be reached on 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
